

Safar
Mechanical Engineer — MEP Design — CAD — ANSYS Simulation
—
Baku, Azerbaijan

Professional Summary

Mechanical Engineer with experience in MEP systems design, HVAC, drainage, and engineering documentation. Skilled in Autodesk Revit, CAD modelling, CFD and structural simulation using ANSYS. Experienced in multidisciplinary engineering projects including residential developments and topology optimization research.

Experience

Consultancy 2024 - Present
/ MEP Engineer

- Designed and coordinated HVAC, ventilation, plumbing and drainage systems for residential projects.
- Prepared engineering calculations, equipment selections and technical documentation.
- Worked with Autodesk Revit for BIM coordination and MEP modelling.
- Applied international engineering standards and local Azerbaijan regulations.

Education

of Science in Mechanical Engineering 2024 - 2026
Mechanical Engineering

Projects

Optimization of Automotive Components using ANSYS

Performed static structural, modal, transient and thermal analysis using ANSYS. Applied topology optimization to piston and connecting rod components, reconstructed optimized geometries in Fusion 360, and validated performance through simulation.

MEP Design Project

Developed HVAC, stormwater drainage and irrigation design solutions for a residential development project.
